

CODE COLLEGE NETWORK

Effective Online Education

"When Michigan adopted the 2000 ICC Codes and 1999 National Electric Code, we knew we needed to ensure statewide, uniform enforcement. In addition, we needed to provide readily accessible training and information. That's why we launched Michigan's Online Code Training Series. BMI did a great job developing the program, and has been very responsive to changes and suggestions. We continue to receive accolades from people who use the system."

Larry Lehman

Building Division Chief

Michigan Department of Labor, Bureau of Construction Codes

The Code College Network is a joint initiative of Building Media Inc (BMI) and the Building Codes Assistance Project (BCAP), designed to address the under-funded training needs of the construction industry. As building technology advances and states revise and update code, building professionals need easy-to-access interpretation guidelines, product information, installation details and guidance regarding performance standards. Increasingly, this same audience must also earn continuing education credits (CEUs, LUs and PDHs) to maintain professional licenses. Working with state code agencies and building trade associations, BMI developed an internet-based training approach to distribute and communicate updated building technology, code, and product information.

We're looking for partners to help us in the development of state specific Code College – at no cost to you, your organization or agency! The site can also be made available to distribute any other pertinent information – both free and fee based material. A simple cooperation agreement can get your sponsorship started. Call today to discuss the many ways we can begin working together to effectively distribute timely information on building more efficiently.

Please contact Tami at BMI for more information
