The U.S. Department of Energy's Building Energy Codes Program is an information resource on national model energy codes. We work with other government agencies, state and local jurisdictions, national code organizations, and industry to promote stronger building energy codes and help states adopt, implement, and enforce those codes.

The Program recognizes that energy codes maximize energy efficiency only when they are fully embraced by users and supported through education, implementation, and enforcement.

Interior Lighting:

1. Total proposed watts must be less than or equal to total allowed watts.

Allowed Watts	Proposed Watts	Complies
7040	6136	YES

Controls, Switching, and Wiring:

2. Independent controls for each space (switch/occupancy sensor).

Exceptions:

Areas designated as security or emergency areas that must be continuously illuminated.
 Lighting in stairways or corridors that are elements of the means of egress.

3. Master switch at entry to hotel/motel guest room.
 4. Individual dwelling units separately metered.
 5. Each space provided with a manual control to provide uniform light reduction by at least 50%.

Exceptions:

Only one luminaire in space;
 An occupant-sensing device controls the area;
 The area is a corridor, storeroom, restroom, public lobby or sleeping unit.
 Areas that use less than 0.6 Watts/sq. ft.

6. Automatic lighting shutoff control in buildings larger than 5,000 sq. ft.
 Exceptions:
 Sleeping units, patient care areas; and spaces where automatic shutoff would endanger safety or security.
 7. Photocell/astrominical time switch on exterior lights.
 Exceptions:
 Lighting intended for 24 hour use.
 8. Tandem wired one-lamp and three-lamp ballasted luminaires (No single-lamp ballasts).
 Exceptions:
 Electronic high-frequency ballasts; Luminaires on emergency circuits or with no available pair.
